University: Bharathiyar University

Digital portfolio

A digital portfolio serves as a platform to present creative ideas while also highlights the work and skills of the participant

Agenda:

- Problem statement
 - Project overview
 - End user
 - Tools and technologies
 - Portfolio design and layout
 - Features and functionality
 - Result and screenshot
 - Conclusion
 - GitHub link
-

Problem statement

In today's era traditional resumes alone are not enough enough to showcase skills and projects effective. many students fail to showcase their skills of professional experience

Project overview

I created a portfolio that showcase my talents in html , and all the other designing ideas of myself

It contains about myself and the project and the skills that I obtained

The idea is to establish my skills and the project that I have done

End user

- The students could take it as a template for their own portfolio
 - Job seekers who could share their resumes in an interactive ideas
 - Freelancer who could showcase their previous works to impress their client
 - Professional who could create their work to the new companies
-

Tools and technologies

- Html to create the basic structure idea of the website and gives preview
 - Css to create the styling properties of the webpage
 - Java script to create interactive web page
 - Code pen tha online platform for exicuting code
-

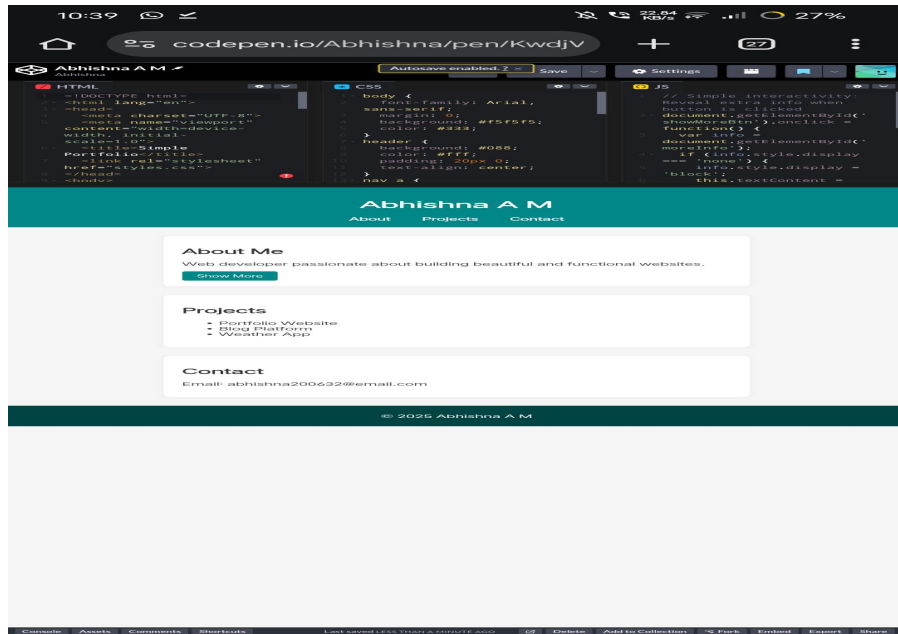

PORTFOLIO DESIGN AND LAYOUT

It includes the home about me that
redirect to the project skill and contact
it has responsive layout using the flex
that can adapt as per the screen size

FEATURES AND FUNCTIONALITY

- Navigation bar with smooth scrolling
 - Interactive elements (hover, effect, animations)
 - Contact form
 - Responsive design using flex
-

RESULT AND SCREENSHOT

CONCLUSION

The project conclude that every student or work seekers can adapt as per the practical amendment of the technical knowledge which creates a first impressions and create the interview process with ease
